Yes George, there were quality assurance issues with the earlier data that we are working. We are on this.

Subject: Colorado Spill Web Page

Dana,

The [epa.gov](http://www2.epa.gov/goldkingmine) web site on the Colorado spill is live: <http://www2.epa.gov/goldkingmine> It does not have any sampling. We were not able to post the August 5th and 6th data table from Region 8, as we did not have interpretive language to explain what the numbers mean for human health and the environment. We would like to post that table and interpretive language as soon as possible. Jennifer Colaizzi, our PIO in the EOC, is working with the Environmental Unit and the Water Desk to get the interpretive language. Region 6 is also expecting that we will post their baseline data today. And there is data for August 7,8, and 9 from Region 8 that is going through QA/QC and will be ready soon. Any help that you can provide to help us get the narrative language to post would be much appreciated.

Once, we have data posted on the [epa.gov](http://www2.epa.gov/goldkingmine) site, we would like to stop new information from being posted on the publically visible portion of the [OSC.org](http://www2.epa.gov/goldkingmine) site. We would like a message at the top of the [OSC.org](http://www2.epa.gov/goldkingmine) Gold King Mine page telling visitors that for up to date information they should go to: <http://www2.epa.gov/goldkingmine>

- George
